Modern Group Beverage Bottling Company Energy Policy

MGBBC aims of our EnMS is to continually improve energy performance, in particular reduction energy consumption and CO2 emissions, in a sustainable way and in compliance with legal requirements.

MGBBC aims to make energy policy applies to every department in our company, every activity and process, with the cooperation of every employee and service provider.

To realize this, we have established, implemented and maintained a certified energy management system in accordance with ISO 50001:2018, which comprises the following points:

Our Energy Management System (EnMS) will help us to:

- * Planning and introduction of energy conservation measures.
- * Ensure that sufficient resources are available to achieve our energy objectives and targets.
- * Measurement and monitoring of energy consumption
- * Document and provide energy use information to achieve performance improvement objectives
- * Upskill personnel in their EnMS roles.
- * Comply with all legal and other requirements related to our use of energy.
- * Continual review of energy performance with respect to processes and activities.
- * Effectively purchase energy efficient products and services in new design and operations.
- * Regular analysis and evaluation of energy saving measures.

MGBBC is committed to encourage employees to understand and commit to the EnMS as applicable to their roles, suggest opportunities for reducing or eliminating energy and water use in our activities and support our efforts to improve our overall sustainability strategy.

Our energy policy applies to every department in our company, every activity and process, with the cooperation of every employee and service provider.
